

Post lock-down fever scanning access control solutions

As planning for relaxation of the lock down progresses, means of minimising transmission exposure for colleagues, customers and the wider public is of course critical. Social distancing, PPE and associated measures are central themes, but means of actively identifying those with symptoms which might indicate Covid-19 before contact with others is also key.

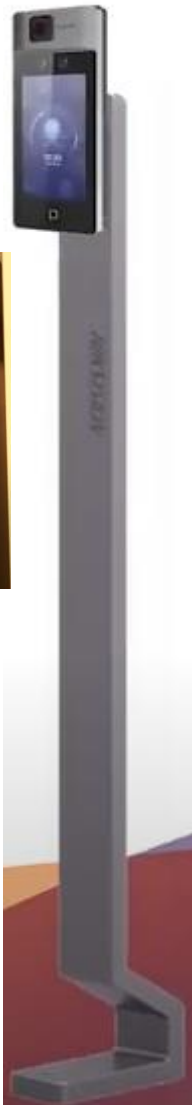

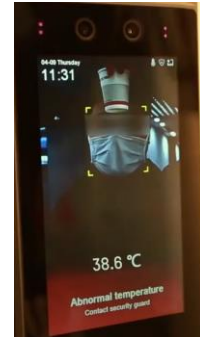

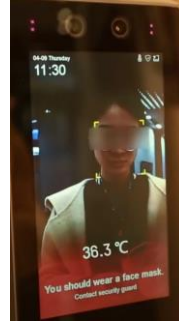

In response, DSIS is able to design, supply, install and support integrated temperature screening access control solutions using Hikvision's MinMoe terminal. This contact free and fully automated solution ensures that if an elevated skin-surface temperature is recognised, entry will be denied, prompting the individual to seek medical advice. This, along with mask detection, and automatic audio response, can help ensure risk exposure is reduced for colleagues and the wider public.

The solution is ideal for use in workplaces, medical and care facilities, transport hubs, schools, residential settings and more.

DSIS Solutions offer Design Supply Install Support of Hikvision Solutions and offer a one stop shop for the latest in Temperature monitoring technology.

Ultra Face Recognition Terminals

- Temperature measuring range: 30 °C to 45 °C (86 °F to 113 °F), accuracy: ± 0.5 °C
- Recognition distance: 0.5 to 1.5 m
- Face mask alert, displays temperature measurement results of individual
- Triggers voice prompt when detecting abnormal temperature
- 50,000 face capacity, 50,000 card capacity, and 100,000 event capacity
- Built in MiFare Compliant Proximity Reader
